INDUSTRIAL, DECORATIVE AND
SWIMMING POOL SYSTEMS

www.microforce.dk

The logo for Microforce, featuring the word "Microforce" in a bold, sans-serif font, enclosed within a thick black rectangular border. The background of the entire page is a grayscale, high-magnification micrograph of a textured surface, possibly a coating or material under test, showing various ridges, valleys, and fine details.

Danmark

THE FUTURE OF COATINGS STARTS HERE

PAVITOP WATER

It is a multilayer system formulated to make large surfaces ensuring a smooth, durable finish with high mechanical and chemical resistance.

The PAVITOP WATER coating is a water epoxy paint of great resistance and easy application, ideal for painting large surfaces. It provides a colored finish of 2 components based on epoxy resins and amine, in aqueous dispersion and high solids content.

INDUSTRIAL FLOOR

100% solid epoxy multilayer system formulated for parking lot applications or high transit systems, even for type C anti-slip certifications. A durable finish, easy to apply and with mechanical properties of resistance to compression, Very good bending and traction.

DECOFLOOR

Complete system of breathable cement paint to rehabilitate any type of pavement or porous surface. DECOFLOOR is an industrial and at the same time decorative water based floor.

It can be applied in a very simple way by individuals, companies specialized in the sector, private properties, swimming pools, urbanizations or cities. Its aging resistance ensures long durability. An ideal easy to apply system for repairs of rough pavements, ideal for both indoor and outdoor pavements.

MICROFORCE®

Microforce microcement is a continuous bi-component coating made from cement, microgranulate aggregates and colored pigments, mixed with polymers and resins.

This manufacturing process gives it a very high tensile and compressive strength as well as a high chemical resistance in thicknesses of only 3 mm.

In addition, the system provides high impermeability and allows the customer to customize both color and texture to their liking. The manual application process makes it unique and unrepeatable. Being able to be applied directly on any firm support, the microcement allows to save time and costs of work as the removal of tiles or old pavements, being able to be placed on countless existing elements as now concrete surfaces, stoneware, tiles, plaster, drywall, metal, plastic or marble.

The release to the traffic once sealed is immediate, being able to be tread at 8 hours.

To obtain the definitive characteristics of hardness and impermeability we will have to wait about 72 hours and it is available in fine and rustic finishes.

Micrex

It is our star decorative system, does not wear, with high impact resistance. It is a continuous smooth coating between 2 and 3 mm thick. Due to its incredible wear resistance, it is an ideal decorative mortar solution for and indoor and outdoor coatings.

Vertical and horizontal, excellent adhesion to many supports. Based on state-of-the-art epoxide cement technology together with selected aggregates and additives, they make the Micrex system a unique finish, of enormous strength and great impermeability, a class superior to the usual microcement system.

More than 15 colors on chart. Available in two types of finishes: rustic finish and smooth finish. The beauty and aesthetics of an epoxy microcement but with the hardness and mechanical resistances of a high traffic industrial pavement.

Micrex IRON

Epoxy microcement for indoors and outdoors. Continuous smooth coating between 2 and 3 mm thick. It is the pavement with the highest resistance that exists in the market.

This system guarantees durability and very high resistance of the pavement in very transitable floors. Total resistance to ultraviolet light. Being composed of metal particles the most common colors are silver, bronze and oxide but you can develop custom colors depending on the project.

MICROFORCE RUSTIK

MICROFORCE har udviklet flere rustikke finish, fordi vi forstår, at bevarelse af æstetik og naturlighed af de finish, der tidligere blev anvendt i kulturarv og gamle bygninger, er en unik og uovertruffen konstruktiv påstand, og opnå en kontinuerlig linje i denne type finish, der anvendes i mikrocement, gør vores MICROFORCE RUSTIK-linje til en unik finish, naturlig og med stor æstetisk skønhed.

Til indendørs og udendørs overdækket, til gulve, facader eller vægge.

MICREX RUSTIK

The line of coatings MICREX, is a line with mechanical performance and wear resistance superior to any solution on the market, with MICREX we have a fine and non-slip line depending on the application of the product, suitable for indoors and outdoors, with the MICREX RUSTIK line, a system of equal mechanical performance and waterproofing as Micrex, but with a natural aesthetic, ideal for old buildings or areas rural, an ideal aesthetic for constructive renovations of interiors and exteriors, walls and facades, with a great resistance to pedestrian traffic, but with an aesthetic of high rustic decoration, irregular, unique, the naturalness of the microcement with mechanical performance of an industrial system

MICROSTONE

MicroStone is a natural micro-polished polymer coating, a fully waterproofed system, suitable for interiors, exteriors, floors and walls, a system designed to simulate a natural stone effect, but smooth, resistant and with a high resistance to chemicals.

A feeling of natural stone but with the performance of an industrial coating within the high decoration, this fact makes that we can cover an interior pavement or also any type of furniture. Thanks to its large composition of special resins with natural aggregates of quartz and selected silica has a high adhesion to any type of support, making it an ideal solution for the application of vertical and horizontal supports on wood, concrete, plaster, tile, ceramics or cement.

We have a fine and thick finish, with fine or more rustic textures depending on the sanding system, with 10 colors at your fingertips.

MICROSTONE POOL

Smooth microquartz-polished continuous coating approximately 4 to 5 mm thick, made on concrete or ceramic surface, by applying successive layers: MicroStone Pool base layer with fiberglass mesh (two-component mortar to regularize waterproofed supports), two layers of MicroStone Pool Ground (decorative acrylic coating), for fine finishes perform one or two layers of MicroStone Pool Thin (decorative acrylic coating with selected aggregates), the whole system is sealed with HIDROFUGANTE (water-based water repellent).

The waterproofing base system is essential for the connection and the proper functioning of this to prevent water leakage. The composition of the system and the amount of cement included in it, causes heat retention and under direct sun exposure helps to maintain a more regular water temperature.

Its maintenance is regular to maintain its appearance and proper functioning. This includes the chemical balance of the water and the cleaning of the coating. It is important to work with experienced professionals in the construction of cement pools to ensure a high quality and durable result complying with the current regulations in the pool sector.

MICROSTONE POOL

The MICROFORCE POOL system, is a decorative system based on totally water-repellent microcement, of great mechanical properties and of easy application to meet the demand in swimming pools without having any problem of lifting or fissures due to the attack of chlorine, osmotic pressure or atmospheric conditions.

The MICROFORCE POOL system is based on a continuous decorative coating of low thickness, water-repellent fibred microcement. The system is ready for permanent immersion. The system is prepared for permanent immersion, and can be applied both indoors and outdoors swimming pools.

SAND POOL

The SAND POOL system is a resin quartz system for swimming pools and exteriors that simulates the beach effect. It is a very high performance finish, fully waterproofed and non-slip effect. A unique system on the market, based on resinated quartz sand with selected resins formulated together with a pre-waterproofing system and a large seal to provide the system with total watertightness and leakage.

We have white, bone, cream, ivory and ochre colors, among others. A beach at your fingertips.
